coastal management and planning

The Western Australian coast is a dynamic social and natural environment subject to continuous change in response to seasonal climatic conditions. It is a popular place for people to live and recreate and contributes to a sense of place in the Australian culture. Our coast is also an important ecological system and provides valuable habitat for vegetation and fauna. To preserve this coastal environment, we need to sustain a balance between both the social and conservation values.

Our Services

Ecoscape's coastal planning capabilities include:

- development of local and strategic coastal management plans
- integrated land use planning
- weed management and restoration plans
- coastal vegetation community and condition mapping
- access and infrastructure assessment and mapping
- erosion and dune movement assessment
- access and recreation design planning
- community and stakeholder consultation.

Our Approach

Ecoscape develops coastal management plans and strategies aimed at protecting and sustaining the important environmental features of each coastal area while also improving its recreational qualities for the public. Our team integrates all aspects of coastal management from the assessment of coastal landforms and vegetation through to designing recreational areas for public use.

Our Experience

- Natural Areas Management Plan, Town of Cottesloe
- Coogee Beach Management and Concept Plan, City of Cockburn
- Lancelin Foreshore and Land Use Management Plan, Shire of Gingin
- Coral Bay Foreshore Management Plan, Department of Environment and Conservation
- Cambridge Coastal Strategy, Town of Cambridge
- Mandurah Foreshore Focus, City of Mandurah
