

interpretive signage

Effective interpretive signage provides visitors with a greater understanding of the site and its biophysical and socio-cultural context. This develops a sense of ownership, connection and responsibility for visitors. The Western Australian landscape offers opportunities for interpretation because of the unique mix of indigenous and non-indigenous histories, as well as the distinctive geological and biophysical processes.

Our Services

- broad scale site analysis for identification of interpretive opportunities
- literature review and research for development of interpretive narratives
- community consultation
- identification of interpretation content and appropriate signage formats
- collaboration with artists
- preparation of interpretive signage concepts
- detailed design and documentation of interpretive signage
- administration of interpretive signage construction works

Our Approach

Ecoscape has an excellent understanding of the regional and local sense of place which is essential in the interpretation of a site. Our approach interprets both cultural and environmental values at a high level. Spatial tools assess the environmental values and integrate them into interpretation solutions.

Ecoscape believes design solutions should be creative, innovative and sustainable to meet the needs of the Client and the community and that effective interpretation should alter a visitor's perception of a site.

Our Experience

- JH Abrahams and Mabel Talbot Reserves Interpretive Signage, City of Subiaco
- Minim Cove Foreshore Landscape & Interpretive Signage, LandCorp
- Booyeembara Park Master Plan, City of Fremantle
- Turquoise Coast Foreshore Trail & Artworks, Ardross Estates
- Rottnest Island Coastal Walk Trail, Rottnest Island Authority
- Meelup Regional Park Interpretation, Meelup Regional Park Management Committee
