

site analysis

Site analysis is the critical and creative component of design. Landscape is the cultural construction of nature. In order to understand a landscape it is necessary to understand a specific site's social and environmental histories. This site reading and editing gives our landscape architects a strong conceptual beginning for a design response. By engaging with the particulars of site, the design solution makes the landscape visible and legible and contributes to areas larger than its own physical context.

Our Services

Identify and engage with a site's specific:

- geomorphology
- environment
- views
- terrain
- land use history
- site organisational systems
- performative agendas
- formal languages
- material palettes
- significant content.

Our Approach

Our interdependent skills allow us to understand and engage with the natural systems that make an 'ecology' and the cultural constructs that make a 'landscape' at many scales. Through this understanding, the shaping of the land for a particular purpose results in a human settlement that heightens the beauty, spirit and ecology of the place.

Our Experience

- Knutsford Site Analysis, LandCorp
- Brookdale Residential Development, Stockland
- Collie CBD Redevelopment Master Plan, Shire of Collie
- Faulkner Park Future Options, City of Belmont
- Melville Playscape and Landscape Design, City of Melville
- Rottnest Island Coastal Walk Trail, Rottnest Island Authority
- Trails Master Plan, Shires of Kalamunda and Mundaring
