weed management

Weeds have the capacity to threaten the biodiversity values of our natural environment. They are difficult to effectively manage and require innovative strategies which focus on the natural environment's resilience to self manage the problem. At Ecoscape we understand the importance of resilience building and target the right weed species to optimise this process. We have prepared the Environmental Weed Strategy for WA (EWSWA) and the WA State Weed Plan which utilise strategic processes for combating problem flora. We have also prepared numerous local weed management plans and overseen the practical aspects of weed control.

Our Services

Ecoscape's weed management capabilities include:

- field assessment
- site mapping
- management and strategy plans
- site specific databases
- prioritising threats
- identification guides
- control options.

Our Approach

Ecoscape is experienced in both the theory and practical implementation of strategies and plans to minimise the threat of weeds. Our team can conduct comprehensive surveys and produce detailed mapping to develop innovative, cost-effective and sustainable solutions to reduce short and long term impacts of problem species. We offer a variety of effective and site specific control options to remove the weeds. An integrated and sustainable approach is used in order to reduce both temporal and long term management impacts and costs. Processes are examined at both regional and site prioritisation level, depending on the scale of the project which result in the delivery of innovative solutions through comprehensive assessment of all relevant site issues.

Our Experience

- Environmental Weed Strategy for WA, Department of Conservation and Land Management
- Weed Survey & Bushland Condition Assessment Garden Island, Department of Defence
- Bushland Weed Management Plan, Town of Bassendean
- Big Swamp Weed Management Plan, City of Bunbury
- Cottesloe Natural Area Management Plan, Town of Cottesloe
- Lang Hancock Railway Extension Weed Survey, Calibre Engenium Pty Ltd
- Millars Creek Weed Survey, Ardross Estates
